

NAME

qlbar-0.1.3 – Cool Toolbar for X11

SYNOPSIS

qlbar [-hHVv] [-c config file] [-m menu file] [--bar-color color] [--balloon-color color] [--font-color color] [-f name] [-s size] [-d directory] [-B true/false] [--bar-height height] [--bar-width width] [-t seconds] [--icon-width width] [--icon-height height] [--voffset pixels] [--hoffset pixels] [-l layout] [--daemonize]

DESCRIPTION

qlbar is a Toolbar for X11. It allows quick launch applications that user specifies in menu file. QLBar (default) appears as 1 pixel height line at the top of the screen, but most appearance parameters may be configured. See OPTIONS.

OPTIONS

- balloon-color
background color of tooltip balloon
- bar-color
specifies qlbar color
- bar-height
height of a bar in pixels, default 1
- bar-width
width of a bar in pixels, default is computed as: icon width multiply icon count
- t or --bar-time
delay in seconds after that toolbar will hide
- c or --config
config file
Default \$HOME/.qlbar/config is used
- font-color
tooltip balloon font color
- f or --font-dir
path to directory that contains TTF fonts
- f or --font-name
font used on balloon tip
- f or --font-size
tooltip balloon font size
- D or --daemonize
make qlbar run in the background
- h or --help
help screen
- H or --horizontal
this option indicates that toolbar will be placed horizontally. Same as -l horizontal
- hoffset
horizontal offset from the corner of screen in pixels. Corner is specified by -p or --position option and is only affected when -H or -l horizontal has been chosen
- icon-width
width of the icons in pixels
- icon-height
height of the icons in pixels

- l** or **--layout**
layout may be **horizontal** (default) or **vertical**
- m** or **--menu**
file containing items information: name, execute path, icon file path. Menu file format is compatible with fluxbox menu file and contains lines as follow:
[exec] (application name) {execute path} <icon path>
Default \$HOME/.qlbar/menu is used
- p** or **--position**
position of the toolbar: n, ne, e, se, s, sw, w, nw
- B** or **--show-balloon**
true or false show or not baloon, default balloon is shown
- V** or **--vertical**
indicates that toolbar will be placed vertically
- v** or **--verbose**
produces lots of output
- voffset**
vertical offset from the corner of screen in pixels. Corner is specified by **-p** or **--position** option and is only affected when **-V** or **-l vertical** has been choosen

TODO

- transparent rectangle with alpha that appears when user moves mouse over toolbar item
- sliding bar instead of sudden appear, hide
- fixed qlbar icon, with clock, reminder, or other...
- right click context menu over every item with extra features (configure)
