

**NAME**

qlbar-0.1 – Cool Toolbar for X11

**SYNOPSIS**

**qlbar** [-hHVv] [-c config file] [-m menu file] [--bar-color color] [--bar-height height] [--bar-width width] [-t seconds] [--icon-width width] [--icon-height height] [--voffset pixels] [--hoffset pixels] [-l layout]

**DESCRIPTION**

**qlbar** is a Toolbar for X11. It allows quick launch applications that user specifies in menu file. QLBar (default) appears as 1 pixel height line at the top of the screen, but most appearance parameters may be configured. See **OPTIONS**.

**OPTIONS**

- bar-color** specifies qlbar color
- bar-height**  
height of a bar in pixels, default 1
- bar-width**  
width of a bar in pixels, default is computed as: icon width multiply icon count
- t or --**bar-time**  
delay in seconds after that toolbar will hide
- c or --**config**  
config file  
Default \$HOME/.qlbar/config is used
- h or --**help**  
help screen
- H or --**horizontal**  
this option indicates that toolbar will be placed horizontally. Same as -l **horizontal**
- hoffset**  
horizontal offset from the corner of screen in pixels. Corner is specified by -p or --**position** option and is only affected when -H or -l **horizontal** has been chosen
- icon-width**  
width of the icons in pixels
- icon-height**  
height of the icons in pixels
- l or --**layout**  
layout may be **horizontal** (default) or **vertical**
- m or --**menu**  
file containing items information: name, execute path, icon file path. Menu file format is compatible with fluxbox menu file and contains lines as follow:  
[exec] (application name) {execute path} <icon path>  
Default \$HOME/.qlbar/menu is used
- p or --**position**  
position of the toolbar: n, ne, e, se, s, sw, w, nw
- V or --**vertical**  
indicates that toolbar will be placed vertically
- v or --**verbose**  
produces lots of output

**--voffset**

vertical offset from the corner of screen in pixels. Corner is specified by **-p** or **--position** option and is only affected when **-V** or **-l vertical** has been chosen

**TODO**

- transparent rectangle with alpha that appears when user moves mouse over toolbar item
- sliding bar instead of sudden appear, hide
- fixed qlbar icon, with clock, reminder, or other...
- right click context menu over every item with extra features (configure)
- tooltip with application name appears when user moves mouse over each item
